

Abstract

Please add the Abstract as follows:

The invention relates to a plug-in connection for pipe and hose lines with a reinforced material cross-section. Said connection consist of a neck that forms at least one detent collar and a connector that can be engaged with the neck and has a least one detent spring with detent limbs, the latter locking behind at least one of the detent collars of the neck. In order for the connector to absorb intense detent forces, it is characterized by at least a double wall in the vicinity of the detent spring openings.
